

# Mastering Absolute Value Equations

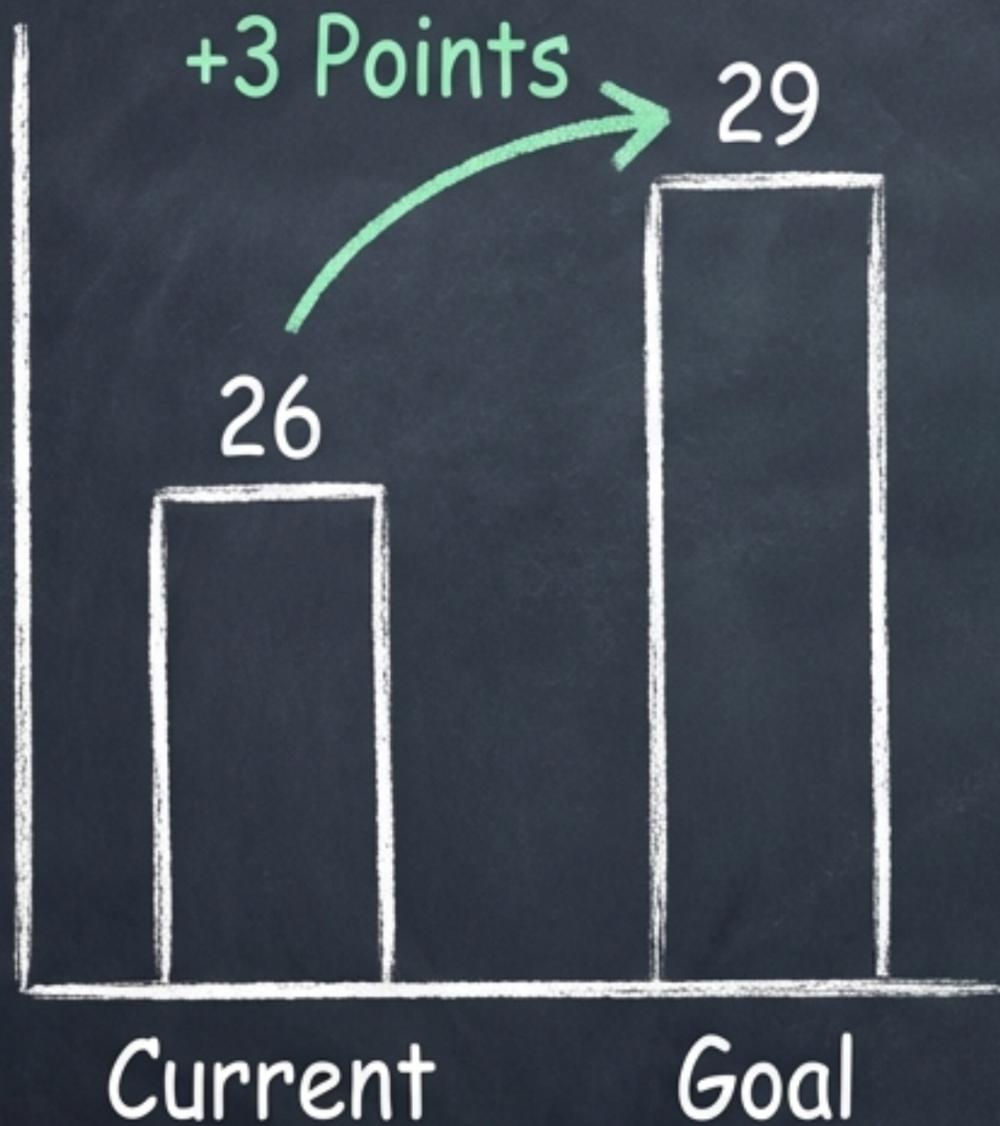

An ACT Math Guide for Grades 9-12

Target:  
+2-3 Points  
on your  
Composite  
Score!

*A Guide by Irfan Mansuri, ACT Specialist*

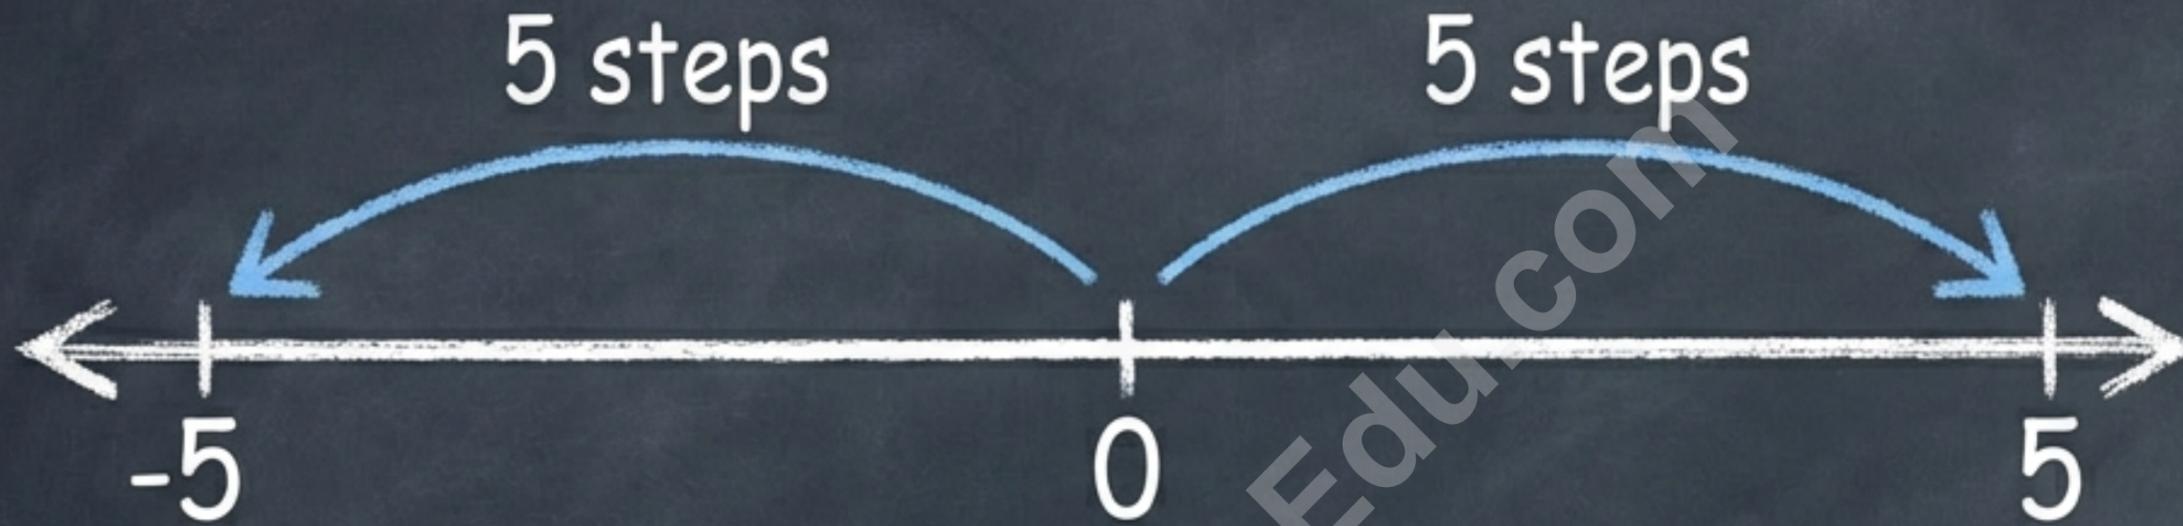

# Why This Topic Matters

- **Frequency:** 2-5 questions per ACT Math section.
- **Difficulty:** Medium difficulty but high penalty for silly mistakes.
- **Impact:** Foundational for inequalities, functions, and coordinate geometry.

A straightforward topic that builds a massive score foundation.

# The Definition: Distance, Not Direction

Forget direction.  
Think Magnitude.  
Distance is never  
negative!

$$|5| = 5 \quad |-5| = 5 \quad |0| = 0$$

Absolute Value ( $|x|$ ) is the distance of a number from zero.

# The Golden Rule: The Fork in the Road

$$|x| = a$$

where  $a \geq 0$

Negative Case

$$x = -a$$

**Memory Trick:**  
The road always  
splits into  
TWO paths!

Positive Case

$$x = a$$

To remove the bars, you must create  
TWO separate equations.

# The Strategy: The I-S-S Method

I

**ISOLATE:** Get the absolute value bars completely alone on one side.

S

**SPLIT:** Create two separate equations (one positive, one negative).

S

**SOLVE:** Find  $x$  for both equations.

Most student errors happen because they skip Step 1 (Isolation)!

# Walkthrough: Basic Equation

## Solve $|x| = 7$

$$x = -7$$

Check:  $|-7| = 7$  (Correct)

$$x = 7$$

Check:  $|7| = 7$  (Correct)

ACT Time Goal:  
This question  
should take  
15-20 seconds.

# Walkthrough: Intermediate (Isolate First)

$$3|x - 2| + 5 = 20$$

Step 1: Isolate

Subtract 5:  $3|x - 2| = 15$

Divide by 3:  $|x - 2| = 5$

Case 1:  $x - 2 = 5 \rightarrow x = 7$

Case 2:  $x - 2 = -5 \rightarrow x = -3$

Don't split until  
the bars are lonely!  
Moving numbers  
after splitting leads  
to wrong answers.

# The Trap: The Impossible Equation

$$|x| = -5$$

**Result: NO SOLUTION**

Absolute value represents distance.  
Distance cannot be negative.

**Alert:**  
If  $|bars| =$   
Negative Number,  
stop working!  
The answer is  
No Solution.

# Visualizing the Trap

$$\text{Solve: } |x - 3| = -4$$

Can you  
walk -4 feet?

*Spotting this  
immediately  
saves you 30  
seconds on  
the test.*

Since distance  $\geq 0$ , the equation is impossible.

# Your Turn: ACT Practice Question

$$\text{Solve for } x: 5|2x + 1| - 3 = 22$$

- A)  $x = 2$  or  $x = -3$
- B)  $x = 3$  or  $x = -2$
- C)  $x = 2$  only
- D)  $x = -3$  only
- E) No solution

*Pause here.  
Grab a scrap of  
paper and try  
to solve it  
before flipping  
the slide!*

# The Solution Breakdown

Step 1: Isolate

$$5|2x + 1| = 25 \text{ (Add 3)}$$

$$|2x + 1| = 5 \text{ (Divide by 5)}$$

Step 2: Split &  
Solve

$$2x + 1 = 5$$

$$\rightarrow 2x = 4$$

$$x = 2$$

$$2x + 1 = -5$$

$$\rightarrow 2x = -6$$

$$x = -3$$

Correct Answer: A

Did you get  
Answer A?  
Great work!  
If not, check if  
you isolated  
the bars first.

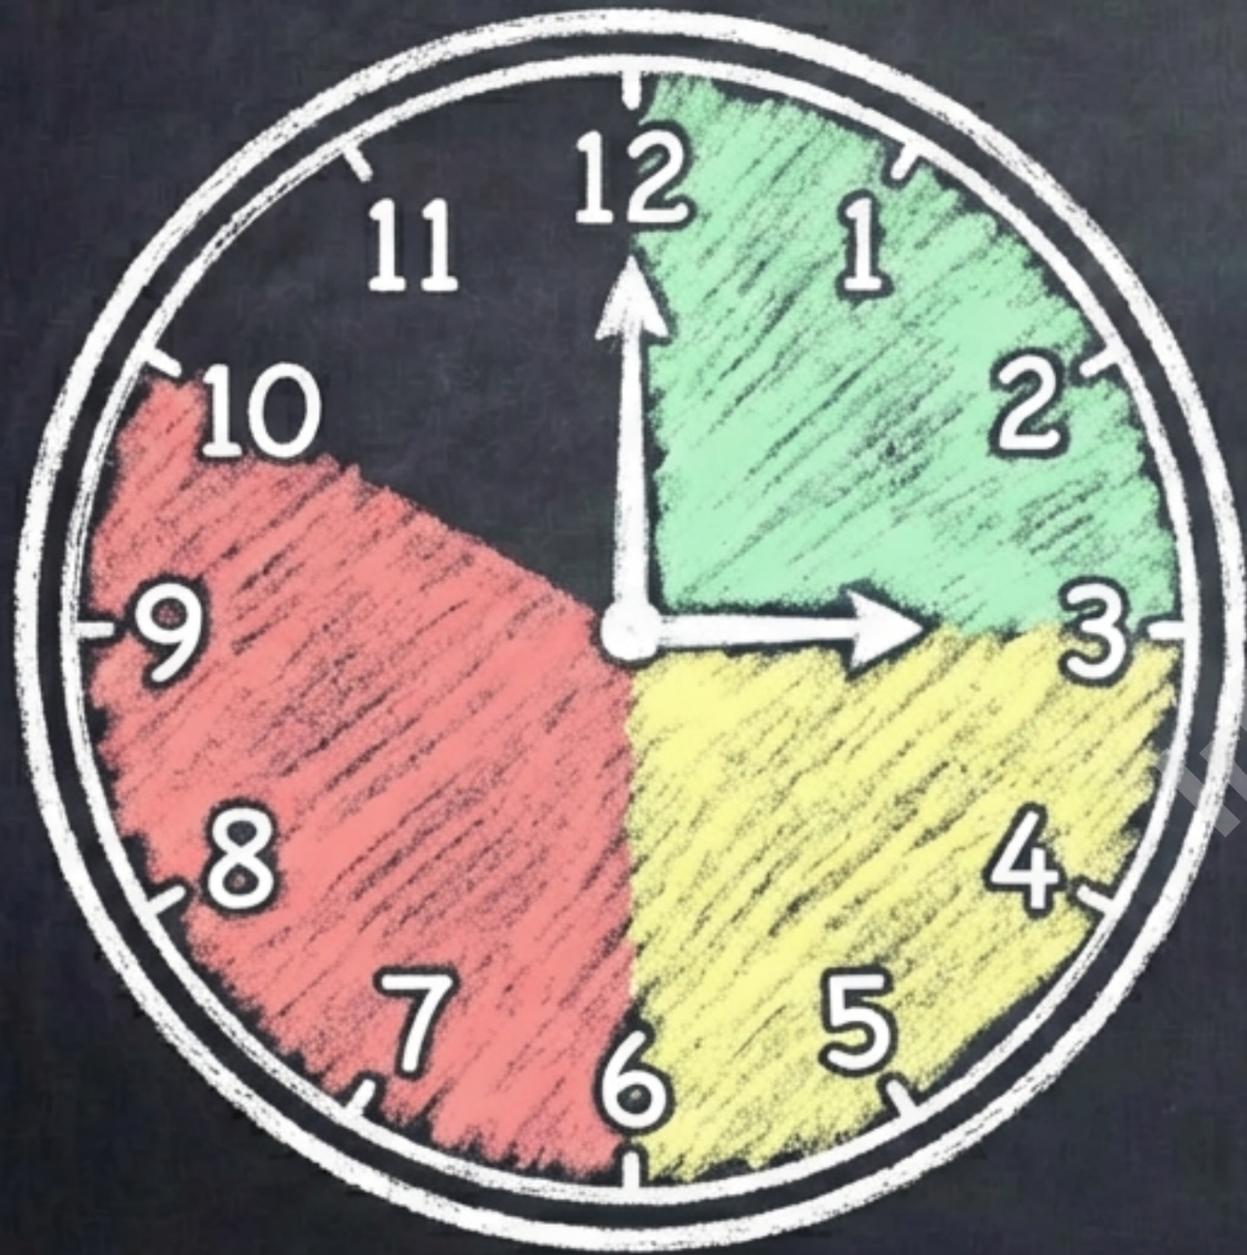

# Pro Tips & Guessing Strategy

## Cheat Sheet

- **Eliminate Single Answers:** Most absolute value equations have two solutions. Cross out options with only one value.
- **The Calculator Hack:** Graph  $y = |\text{expression}|$  and  $y = \text{number}$  to find intersection points.
- **Backsolving:** Plug the answer choices back into the original equation. If it works, it works!

*When in doubt, plug the answer choices into the equation. It takes longer, but it's 100% accurate.*

# Time Management Strategy

**Basic** ( $|x|=9$ ): 15-30 Seconds.

**Intermediate** ( $|3x-6|=12$ ):  
45-60 Seconds.

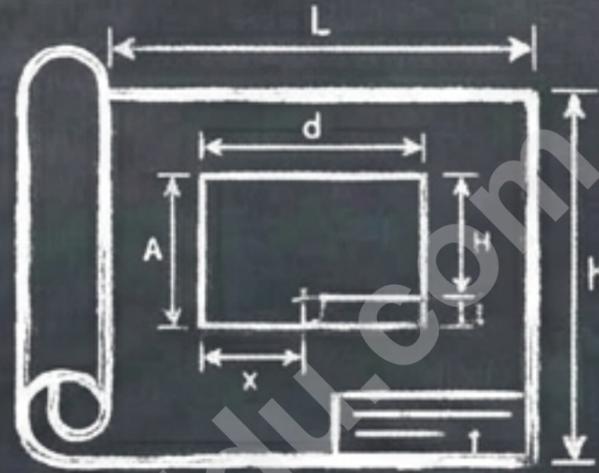

**Advanced**  
( $5|2x+1|-3=22$ ):  
90-120 Seconds.

**Skip Strategy:** If you see nested bars like  $||x-2|-3|=5$ , skip it and come back later. These are time drains.

# Beyond the Test: Real World Applications

**GPS:** Calculates distance between coordinates regardless of North/South direction.

**Engineering:** Tolerance calculations ( $|\text{length} - \text{target}| \leq 0.2$ ).

**Finance:** Measuring variance from a budget (over or under).

*Math isn't just for tests—it's how we navigate the world.*

# Lesson Recap

- Absolute Value = Distance (Always Positive)
- I-S-S: Isolate, Split, Solve
- Check for 'No Solution' (Negative number)
- Plug answers back in to verify

You are ready.  
Go get those  
points!
